Initial Project Idea:

MemoryQuill is a web application that allows users to quickly create, read, update, and delete personal diary entries. Each entry contains a title, date, time, body text, tags, mood emojis, and the ability to mark the entry as public or private. The landing page consists of a clear site name and a custom logo. For the first release, we will focus on core functionality and a simple, usable layout with the key CRUD features to create a working diary entry button, a landing page with the site name and logo, a dashboard table that lists all the entries, etc. Future enhancements could include user authentication, entry exports into PDF, search and filter to find diary entries more easily, and a calendar view.

Contributions:

Group Member	Role/Responsibilities
Yusuf Mohamed	<ul style="list-style-type: none">- Created starter code- CRUD features- Routes- Readme file

	<ul style="list-style-type: none"> - Hosted MongoDB database - Website content
Justyn Umrah	<ul style="list-style-type: none"> - Footer - Navbar - Website content (text and titles) - Partials - Cleaned up GitHub
Adeel Mohammad	<ul style="list-style-type: none"> - Initial draft for website idea - Created logo - app.css
